INTRODUCTION

A.K.S.D Town Management Ltd. has been active in Debrecen since the 1st of January 1992, and now its services are available in several parts of the region. Our Company has 388 employees and the owners are the A.S.A. + AVE Environmental Holding Ltd. and the Debrecen Holding Company.

Our company runs up-to-date waste management apparatus in Debrecen and in 24 other settlements, including municipal-, public-, and industrial waste collection, sewage sludge compostation, joint disposal of some hazardous waste of oil content as well as the maintenance of public places and cemetery services.

The Company built a garbage dump meeting EU norms with an area of ca. 24 ha and 3.5 million cubic ms capacity, which will solve the problem of the region's waste disposal until 2030.

Through our subsidiary companies our waste management service is available for 97 000 people in 40 additional settlements in the Bihar-region and 160 000 people in 88 settlements in the region of Nyíregyháza. We deal with the collection, treatment and sale of secondary raw material as well.

MAIN ACTIVITIES, PRODUCTS AND SERVICES

We launched the organized communal waste collection in Debrecen on a new base with the use of modern, environmentally friendly, dust-free, low noise-level and high compression efficiency pickup vehicles.

The selecting, treatment and baling of selectively collected paper- glass- and plastic wastes from our collection islands are carried out in an approximately 2000 sqm hall.

The first public waste yard of Hajdú-Bihar county has been opened in Debrecen by the AKSD Ltd. There is a free disposal site for the public for electric devices, furniture, lumber, tires and paint waste. We provide possibility to the public to transport reusable and dangerous wastes to the site by their own vehicles.

We cover the organized collection of electric and electronic devices for the reduction of the load of environment with E-waste. Our Company has licenses for collection and treatment. At the moment we have around 40 partners (TEVA, FAG, HELIKER, local governments, etc.),

Our colleagues make up the waste management scheme for free, which offers the most modern and most economical solution to waste management.

Our primary function is the maintenance of the two third of green zones of the town, at around 2.4 million sqm. We perform park maintenance for institutes and ventures on demand (for example: Waterworks of Debrecen Joint Stock Venture, METRO supermarket, Kölcsey Conference Centre, schools, public demands, condominiums).

Our Company cultivates around 5000 sqm of flower surface, significant part of these flowers are grown in our own horticulture.

We perform the removal of dust from the roads of the town in summer time. We run an every day timing cleaning on our maintenance area of 150.000 sqm.

Our Company provides the anti-skidding and snow removing activities on a part of the road system of Debrecen.

Our company provides funeral and enshrinement service at the cemeteries of Debrecen, Debrecen-Józsa, Bocskai kert, Báránd and Püspökladány.

As a pioneering initiative in Central- and Eastern Hungary, one of the strategic aims of our Company is the development of the manufacturing technology of high biological value compost. The production of "Biomass Super AKSD Compost", tested by the Official Laboratory of the Department of Agriculture and National Public Health Institute, receiving a good professional qualification, began in June 2006. Expected capacity is 30.000-50.000 cu. m. a year.

Our Company has a major role in the dangerous waste management of the region including pharmaceutical mycelium, hydrocarbon contaminated soils and management of railway embankments. Several environmental damage exemption are done by us on behalf of MOL Plc and MÁV Plc (18.688 tons of hydrocarbon contaminated soil and embankment).

Innovative activities offered for foreign commercial co-operation:

Activities, services

Waste management

Transport, collection

- public waste collection
- public waste yards
- containers, harmless industrial wastes, building wastes
