INTRODUCTION

Controflex Ltd. was formed in 1990 by staff of the former Service and Maintenance Centre of Hartmann & Braun Budapest. Its number of staff, its infrastructure and turnover has been developing ever since.

The company's main fields of activity are the following: industrial instrumentation, automation, process and environmental gas analysis, expedient IT development, instrument development and production. Trading, repairing, maintenance, supply of spare parts and utilization parts play an integral part in the activity of the firm.

Our services are wide-ranging: from design, system building, repairs and installation to supply of spare and utilization parts, besides full over guarantee „after sale service”.

Services

Due to its nearly 20 years' operation and the 30 years' experience of its staff, Controflex Ltd has become a significant factor in the Hungarian field of gas analysis. It is supported by a total service background and the quality stock.

We provide full-scale services: gas sampling, gas conditioning, process and emission gas analysis besides the related data process and acquisition from design and installation to guarantee and over guarantee repairs and maintenance.

In contrast to other huge firms, Controflex Ltd has significant market advantages: flexibility, personal relationship with customers, total service background, long decades of professional experience, constant in-service trainings.

On our website you will find more information on the quality of our services according to the continuously expanding list of references, or on the professional expertise of our staff according to the documents of various in-service trainings.

Apart from the list below, you will find more detailed information on the field of activity of Controflex Ltd under „productline“:

- industrial measurement, data acquisition,
- automation,
- process, emission and other environmental gas analysis,
- emission data process,
- targeted IT development,
- instrument innovation and production,
- trading (appliances, spare parts and analysers, DAQ systems)
- repairing and maintenance
- guarantee and over guarantee servicing
- supply of spare and utilization parts

Our clients according to industrial branches are: cement and lime, iron and steel, chemical and petrochemical, pharmaceutical, food industries, thermal power plants, heat treatment plants, municipal institutions, National Public Health and Medical Officers Services etc.

It would be to our delight to greet you amongst our clients.

Please, contact us to receive more information.

We are seeking partners:

in the field of industrial gas analysis, automation and heat metering for the development of our activities, to cooperate in the distribution, and service.
