Deep Forest is a leading gardening and landscaping company in Hungary. Established in 2001, owned by its Hungarian management, Deep Forest's main strength is its qualified and experienced team, including engineers and specialists of different fields: landscaping designers and construction project managers, site managers and skilled workmen, horticulturists, civil engineers, roof garden specialists, interior plantscaping specialists and many more.

Whether it's design or construction, with our broad range of machinery and qualified manpower we are capable of managing all kind of tasks: intensive or extensive roof gardens, public areas, parks and playgrounds, industrial environment, sport fields, private gardens, interior plantscaping of office buildings and shopping malls, etc.

Our activities cover each elements of landscaping: groundworks, utilities, roads and pavements, irrigation and lighting systems, retaining walls, furnituring, water elements, green works and many more.

In our management team we have nine engineers, in the main season we employ 60+ people (skilled workmen, machinists, gardeners, etc.) for our construction team. Most of our managers have international experience from countries like England, The Netherlands, Germany and USA.

Roof Gardens

One of our main specialities is the design and construction of roof gardens. We design and build both extensive green roofs and intensive roof gardens in different sizes, for all kinds of use: green roofs of public buildings, intensive private gardens for appartement houses, industrial environmental solutions, commercial and catering purposes, etc.

One of our main references is Roman Garden in Budapest, which became famous all over Europe. It's a 3000 m2 intensive roofgarden of a premium appartement house, in the downtown of Budapest, all designed and executed by Deep Forest.

Public areas

We are also active in building public areas, parks and playgrounds, cooperating with municipalities, providing great solutions for small villages or large city areas as well. One of the most popular parks of Budapest was designed by our main architect (Erzsébet tér), but we have many references and reached great success in the countryside also. We are currently arranging the construction of the biggest playground in Budapest with more than 17.000 m2 of active playing areas.

Industrial environment

In the field of industrial parks we provide attractive, but cost effective green solutions for our employers. We established good relation with the enviromental authorities and gained a lot of experience in that field in the last couple of years. Our latest reference is the design and execution of the green environment of Hankook Tyres, which is one of the biggest South Korean investment projects in Europe.

International and Hungarian Awards:

Silver medal at FLORIADE 2002 World Horticultural Expo (Amsterdam, Holland) for the Hungarian Garden.
Second prize at IGA Rostock 2003 World Horticultural Expo (Germany) for the Hungarian Village Garden.
Best Landscaping Execution Performance in 2004, Hungary for the construction of Roman Garden in Budapest.
