## 1. Introduction

POLYDUCT Plastic Processing Company LTD. is one of Hungary's significant plastic processing companies, which was founded by KITE ZRT., the country's largest agricultural service provider and trading company in 1992 in Nádudvar. As a result of the continuous growth of the Company in 1997 a new-type of plastic processing technology, the so-called **rotational moulding technology** was introduced, which enables the manufacturing of large-sized products with wide utilization scope. Recently POLYDUCT ZRT. established Hungary's largest hollow-body manufacturing capacity – providing product- and tool design services and tool manufacturing within the company –, and it developed more than 150 types of own and another 30 types of co-operation products. The company's ISO quality assurance system and environmental management system, its compliance with the national and European product standards, the continuous development of the product and manufacturing technology ensures the permanent expansion of partners and guarantees their satisfaction.

## 2. Major activities

As an environmental protection background company, product manufacturing and distribution within the following four major areas:

### Water industry products

- Tanks in various designs
- Artefacts of gravity powered and force powered sewage drain systems
- Climbable and fitted water meter-pits
- Domestic sewage treatment micro equipment

### Waste management

- Communal and selective waste collection bins, domestic composting units
- Collection and storage equipment for hazardous, solid and fluid materials
- Insulation system of waste management units and dumping grounds

#### Products for public areas

- Pots for annual flowers at public areas
- Traffic control boxes, columns
- Anti-slip material storage containers
- **POLYgo** playground equipment

#### Industrial shipment, engineering services

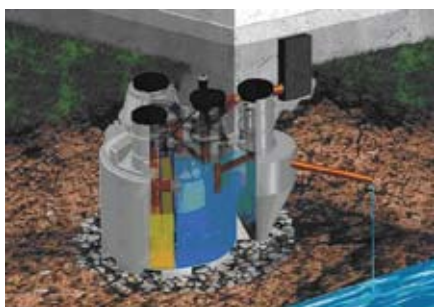

- Design, manufacturing and delivery of products moulded by rotational moulding technology
- Engineering services complying with the full scope activity of the Company, in 3D environments

### 3. Innovative activities recommended for foreign market co-operation

Reliable, distinguished quality products, equipment and complex services for environmental protection and public place investments targeted at local governments, service providers, constructors and final users.

### 4. Partners needed

- From the scope of participants involved by the investments related to the activity of the Company and from the area of possible industrial shipments.
- For the distribution of our products by retailers and distribution companies with experience in the market of environmental products and artefacts

...hoping to welcome you soon as one of our partners...
